

Corporate Presentation
February 2025

Scalable Projects that Deliver Sustainable Cash Flow

Energizing Condor's Future

Developing sustainable energy sources and critical minerals with proven Western technologies

- Canadian-based, TSX-listed with Executive Team experience of +95 years in Central Asia
- Established in 2006 by the founders of the multi-billion-dollar Osisko Group of mining companies
 - Prior Condor oil and gas discoveries in Kazakhstan were developed and sold
 - Condor Management and Technical Teams have comprehensive international experience

Three distinct, **first-mover energy security initiatives** that implement **proven technologies**

UZBEK GAS

Maximizing gas field production while reducing emissions and gas importation requirements

Uz

MODULAR LNG

Lower carbon LNG to displace diesel fuel that supports an expanding transportation network

Kz/Uz

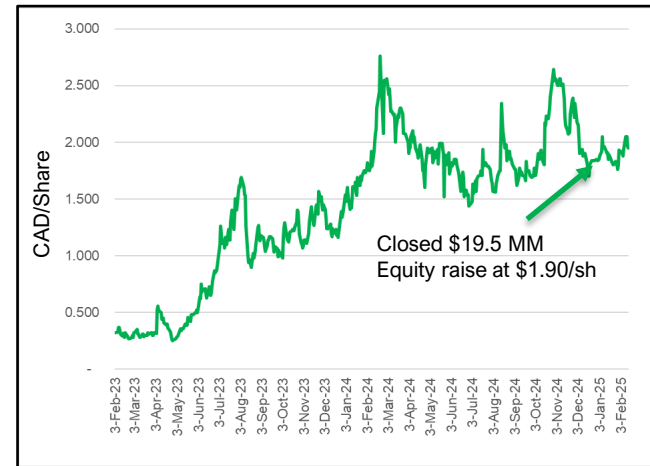

CRITICAL MINERALS FROM BRINES

Lithium, Manganese, Cesium for batteries, energy storage, telecommunications

Kz

Uz- Uzbekistan | Kz- Kazakhstan

CDR share price continues its upward trend with further near-term catalysts

Capital Structure | TSX: CDR

| | |
|-----------------------|-------------------------------------|
| Common Shares | 67.5 million |
| Market Capitalization | \$135 million (\$2.00 per share) |

Our Value Creation Strategy

Build on current natural gas production to develop cleaner fuels + critical minerals that support Central Asia's sustainable energy transition

Uzbek Gas

- Production and cashflow growth using proven Western technology
- **10,510 boepd** (Q4 2024) from 8 fields with over 100 wells
- **\$20.9 million sales** (Q4 2024)

Kazakh Modular LNG

- Secured feedgas = **1 MM liters/day equivalent diesel**
- Detailed off-taker planning with national railway, marine, and mines
- **Multiple phases planned**

Kazakh Critical Mineral Subsurface Brine Development

- Strategic supplier to EU, China
- Documented subsurface concentrations
- **37,300 hectares** on 1st license

Advantages of Central Asia

Rapidly growing domestic energy demand with significant remaining resources

Tashkent, Uz – Major Advancements in an Expanding Economy

Application of Proven Technologies and Operating Practices

- Optimize existing Uzbek gas fields with capital efficient equipment deployed from Canada
- Modular LNG liquefaction technologies + end-user applications in Kazakhstan
- Critical Minerals brine production in Kazakhstan

Stable and Safe Operating Environment

- Multiple super-major energy & mining companies continue to expand operations with ongoing projects and investments:

RioTinto

ExxonMobil

GLENCORE

\$430B Foreign Direct Investment in Kazakhstan since independence

Strategic Transportation Corridor

- Trans-Caspian International Transportation Route (“TITR”) expansion from Asia to Europe **avoids transit through Russia and the Middle East**

Strong Demand + Sizeable Resource

- Economic growth and urbanization significantly increasing domestic energy demand
- Some of the world’s largest energy and critical mineral reserves in Western-friendly jurisdictions

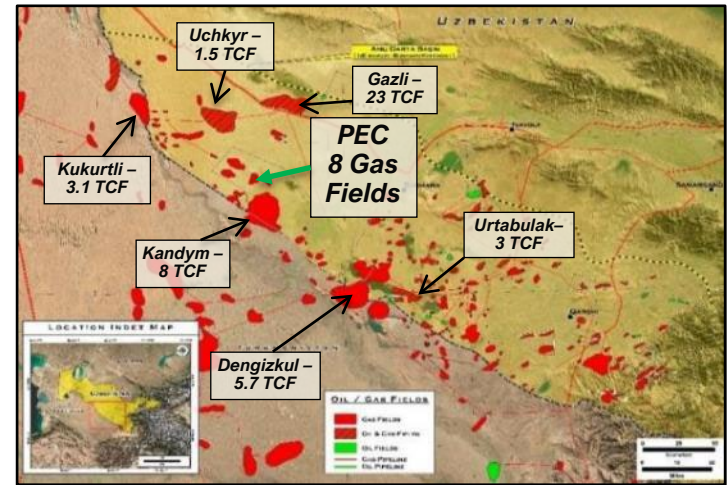

Uz Gas Field Production Enhancement

Condor is the *first and only Western natural gas producer in Uzbekistan*

- Operating 8 producing gas-condensate fields in a prolific region of multi-TCF structures
- Uz reservoirs are analogous to Western Canada’s platform carbonate systems like Charlie Lake and Midale formations
- Previous production decline rates of 20% have been halted and *production is now increasing*
- Applying Western technologies to a +100 well inventory *to grow production and revenue streams*
- 2 rig workover program underway targeting *non-depleted* and *bypassed pay*
- Condor’s established presence provides *opportunities for future expansion* in Uzbekistan

Multi-TCF Gas Fields Surround Condor Operations

10,510 boepd

Q4 2024 production

\$20.9 MM

Q4 2024 sales

10,010 boepd

Q3 2024 Production

\$19 MM

Q3 2024 sales

Massive 1400 meter Hydrocarbon Column

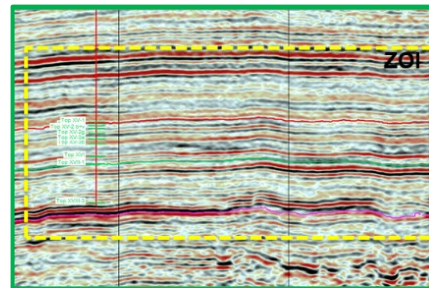

Huge incremental gas potential with modern characterization and 3-D seismic reprocessing

- 320 meters of Upper Jurassic Carbonate Platform
 - Thick, porous and laterally extensive gas-charged intervals
 - Current focus with established production and bypassed pay
- 580 meters of Lower to Middle Jurassic Clastics
 - High quality reservoir sands with diverse depositional settings
 - Limited legacy focus with significant upside identified from recently reprocessed 3-D seismic
- 500 meters of Lower Cretaceous Clastics
 - Stacked channel sands that are producing in offsetting regions
 - High priority target for 2025 drilling campaign
- Ongoing 3-D Seismic Reprocessing Program
 - Significant image improvements to more accurately map gas pay
 - Higher vertical and lateral resolution

Legacy 3-D Data Set

Condor's Reprocessed 3-D Data

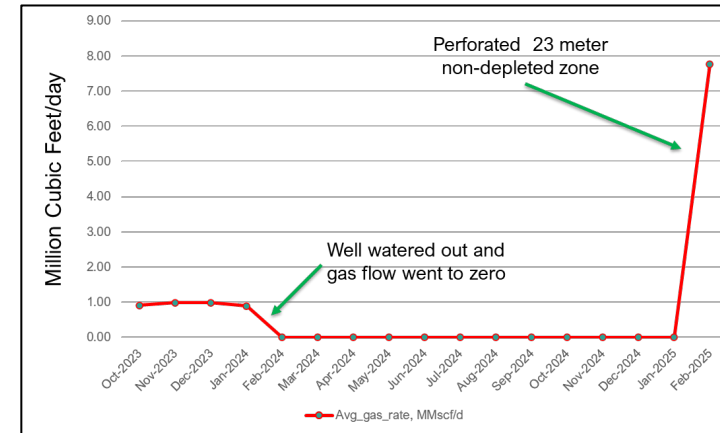

Production Growth Using Proven Western Technologies

Multiple current activities deployed to increase production rates and recovery factors

- Workover program is **exceeding expectations**
 - Recent workover generated a 1300 boepd production increase*
 - Additional wells identified with similar geologic characteristics
 - A third workover rig is being mobilized to accelerate production adds
 - Proving to be **highly capital efficient** compared to new well drilling
- Uzbekistan’s first ‘In-Field Flowline Water Separation’ systems have been installed and commissioned
 - **Generates higher gas production rates** by separating liquids from gas streams close to the wellheads
 - Faster and cheaper compared to traditional 2-phase separators
- Multi-well infill drilling program commences in 2025
 - Evaluating proven Western Canada multi-lateral well applications that could materially enhance Uz production rates and reserves
 - Condor’s reprocessed 3-D seismic data significantly improves the imaging to enhance subsurface mapping and identify new targets
 - Will be **implementing proven Western** drilling equipment and techniques

A-2 well: Increase from Zero to Almost 8 MMscf/day**

Uzbekistan’s 1st In-Field Flowline Water Separator

*Based on a 24-hour production test; **As of February 17, 2025

Modular LNG Overview

Applying proven liquefaction technologies and end-user applications

LNG is cryogenic natural gas in a liquid state

- Stored at low pressure and -162° C
- 600x less volume than natural gas*

LNG is easy and safe to transport and store

- Non-explosive, non-corrosive, non-toxic; evaporates quickly and disperses if released
- Easily transported by trucks or rail hauling ISO tanks at near-atmospheric pressure

Modular LNG plants are efficient and cost-effective to supply LNG

- Localizes LNG production and distribution
- Ideal for regions with limited pipeline networks

LNG Locomotive with Tender

LNG usage increases operating range and yields same power and torque

LNG industrial uses are proven worldwide

- Rail locomotives, marine vessels, mining haul trucks, long distance road haul trucks
- Kazakhstan's national railway is currently undertaking an LNG conversion program

LNG Mine Haul Truck

CAT has 10 million hours using LNG as a dual fuel

* As per US EIA website

LNG Production Benefits for Central Asia

More environmentally friendly & cost-effective than diesel while providing enhanced engine performance

- LNG reduces the carbon footprint of the equipment supplying raw materials needed to transport minerals that are critical for energy transition and renewable energy initiatives

30% Lower GHG Emissions*

95% Lower Particulate Emissions*

100% Lower Sulphur Emissions*

+20% More BTU energy output than diesel (by weight) and improves efficiency with less frequent re-fueling requirements and faster freight delivery times*

LNG Increases Clean Fuel Supply for Kazakhstan's Strategic TITR Expansion

- TITR is shorter and the fastest route between Asian and European markets
- Avoids transit through Russia and the Middle East

Trans-Caspian International Transportation Route ("TITR" in red) from China to Europe materially reduces transport time and disruptions

* Internal calculations based on data per US EIA website

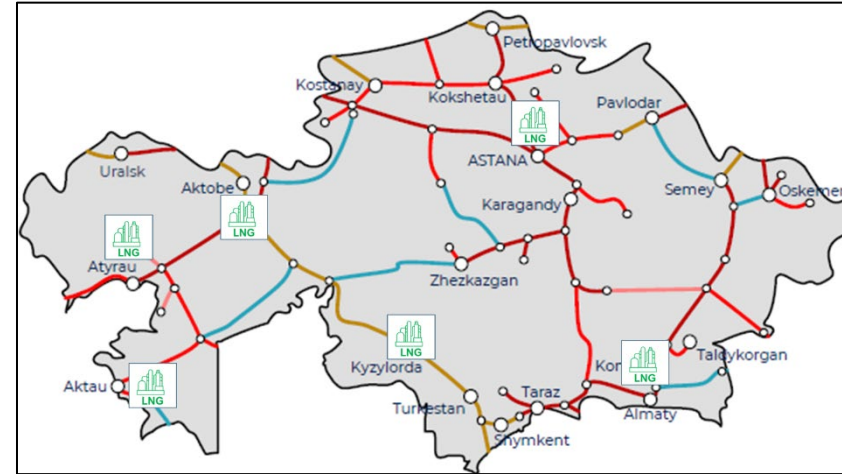

Kazakhstan's 1st LNG Production in 2026

Kazakhstan has been experiencing diesel shortages that Condor's LNG will address

- Secured **two** feed gas allocations to generate LNG
- Detailed planning ongoing with 1st LNG end user KTZ (Kazakh national railway) and Wabtec
 - Condor provides LNG and Wabtec* provides locomotives
- 1st LNG **planned for 2026**
 - Acquired industrial land and electricity allocation
 - LNG facilities will be constructed in the US on modular skids for ease of installation and commissioning
- Addresses critical need for additional fuel due to TITR

Planning for Multiple modular LNG Facilities is Underway

Current 2 feed gas allocations generate

1,085,000 litres/day

is the energy equivalent volume of diesel to be generated with the LNG feed gas allocations

LNG supply for:

~280 Rail locomotives
or
~410 Large mine haul trucks

CO₂ emissions impact equivalent to removing

38,000 cars from roads annually**

Finalizing LNG off-take volumes, delivery locations, scheduling and pricing

*Wabtec is a U.S. based locomotive manufacturer with facilities in Kazakhstan and a Fortune 500 company with a **US\$ 32 Billion Market Cap**: NYSE:WAB
** Internal calculation based on data per US EIA website

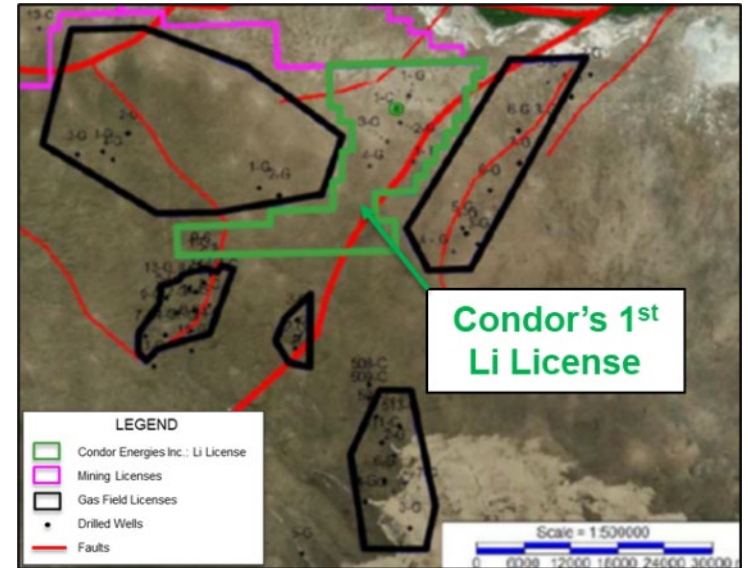

Critical Mineral Licenses in Kazakhstan

Kazakhstan awarded Condor its first 6-year license on 37,300 hectares

License Highlights:

- Heavily faulted in a geothermally active region, allowing migration of mineralized brines into reservoirs
- 670-meter column of tested + untested mineral-rich brine reservoirs from historical wireline and log data, identifying lithium, cesium, manganese, rubidium & strontium
- Li concentration of **67 mg/L** from Lower Carboniferous* with higher grade Devonian penetrated but not tested
- Other notable critical minerals identified include Manganese, Strontium, Cesium

Material Lithium Brine Land Position is Being Established

Seeking a Second Li Brine Mining License

- Two wells previously drilled in targeted license area
- Up to **130 mg/L** Li concentrations* with ~1000 meters of tested + untested lithium brine sands identified

Strategic Access to Asian & European Li Markets

- Neighboring Uzbekistan has significant automotive assembly sector
 - Includes large General Motors plant
 - Focused on developing domestic EV manufacturing

* Concentrations as reported by the Ministry of Geology of the Kazakh Republic

Lithium Development Path

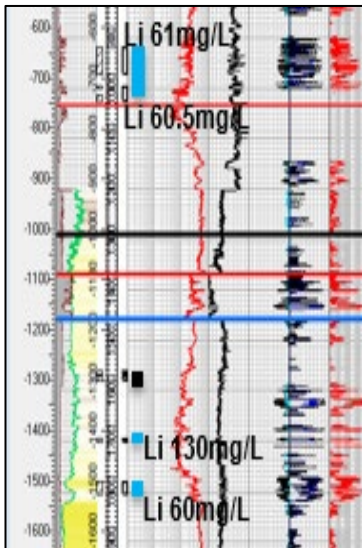

Condor has an extensive geologic understanding of the first license's basin

- Initial development plan is to drill & test two wells
 - Verify deliverability rates, confirm lateral extension and lithium concentrations in the tested + untested intervals, compile data for preparation of NI 43-101 mineral resource or reserves report

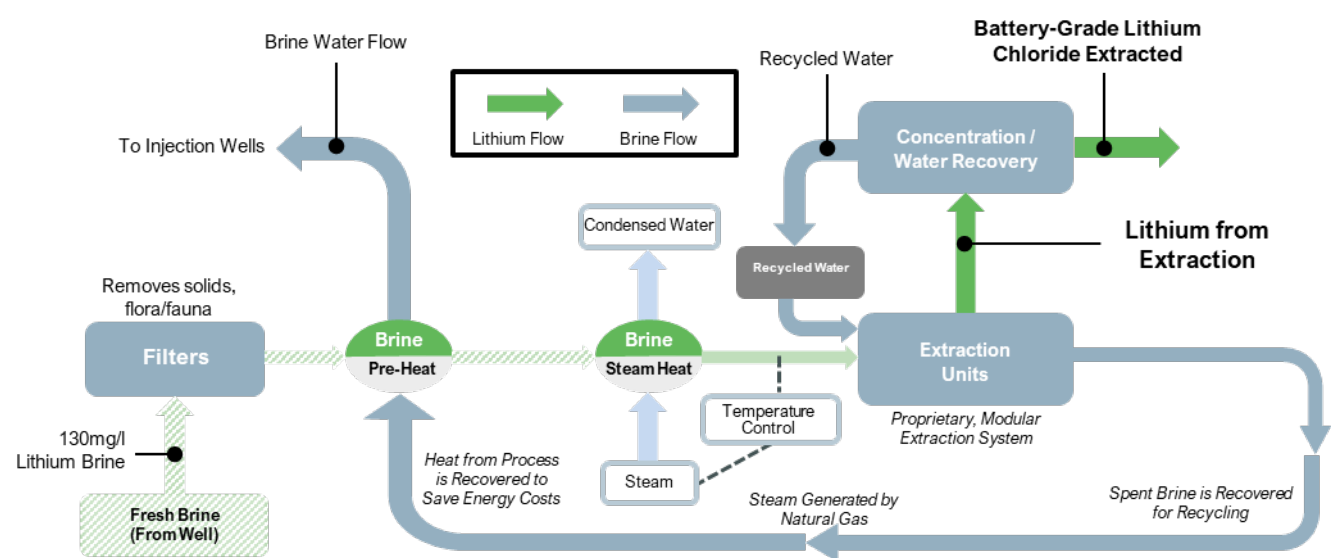

Phase 1 Feasibility

16 new development wells + 8 water injection wells → 250,000 bbls/day of Li brine production = 20 tonnes/day of Li_2CO_3 or LiOH

Regional Li Samples from prospective formations

Proven Direct Lithium Extraction (“DLE”) process
Significantly lower environmental impact vs ‘Salar’ evaporation ponds

E

Environment

- DLE lithium brine extraction for EV battery manufacturing
- Introducing LNG production in Central Asia to reduce diesel fuel usage and reduce emissions
- Implementing Canadian Health, Safety and Environmental training and policy guidelines

S

Social

- Donated over \$5 million to social programs in the regions where Condor operates
- Invested over \$1.6 million in training and educating its employees, both internationally and in-country
- Continued commitment to train and mentor nationals in new projects

G

Governance

- Comprehensive set of policies and practices that guide the accepted behavior of our staff, management and Board
- Seasoned International Management applying the best international practices for all operations.
- Robust system of corporate governance and internal controls

Employee Safety Training

Village Recognition for Water Well Drilling

Near Term Priorities & Catalysts

Increase Gas production in Uzbekistan

- Implement field optimization and workover programs to increase gas production volumes
- Execute capital efficient investments in wells and facilities using modern approaches to field and reservoir management
- Use 'first mover' advantage to acquire additional gas revitalization projects, Exploration opportunities, LNG

Execute Definitive Agreements for Modular LNG Production in Kazakhstan

- Finalize discussions with end-use customers and project funding
- Initial Customers: national railways, marine, mines
- Acquire additional feed gas supplies to support multiple phases
- Benefit from Kazakhstan's ongoing transportation infrastructure expansion

Advance Kazakhstan Critical Minerals Development

- Subsurface Mapping underway
- Drill and test two wells to confirm lateral extent, continuity and concentrations
- Expand acreage position in this strategically located region

Condor's Strong Foundation for Continued Growth

Condor Updating the President of Uzbekistan

Condor's Leadership Team

Decades of international experience, including a combined **95 years** working in Central Asia

EXECUTIVE

Don Streu – President, CEO & Director
Former Chevron
Honorary Consul: Republic of Kazakhstan for Alberta

Sandy Quilty – VP Finance & CFO
Former Arawak, FIOC, BJ Services, PWC

Jon Erickson – Senior VP Operations
Former Chevron, Tullow, Burren Energy

Matt Pachell – Senior VP Asset Development
Former Anadarko, Talisman, Pieridae

Trent Mercier – VP and General Counsel
Former Stikeman Elliott, Norton Rose Fulbright

Norman Storm – Managing Director
Condor co-founder and former Director Osisko Mining

Torsten Kritzler – VP Well Services
Former Chevron, Haliburton, Western Zagros

BOARD OF DIRECTORS

Dennis Balderston
Chairman
Former Partner at E&Y

Andrew Judson
Lead Director
Director of Pieridae Energy, Drift Resource, Field Safe

Werner Zoellner
Founder of Patrimonium Private Equity

Management Biographies

Don Streu
President & CEO

Mr. Streu has over 38 years experience in the oil and gas industry including 22 years with Chevron working in Angola, Indonesia, Nigeria, Canada and the United States. Mr. Streu was the asset manager of Angola's first deepwater production: a 100,000 bopd operation that went from discovery to first oil in only 30 months. As Chevron Indonesia's Planning Manager, Mr. Streu was responsible for developing strategic and tactical plans for an organization producing in excess of 350,000 bopd. Mr. Streu was also the Asset Manager for Chevron Nigeria Limited, managing the entire offshore production of 250,000 bopd. He has been the President and CEO of Condor since September 2008. Mr. Streu is currently the Honorary Consul of the Republic of Kazakhstan for Alberta. He is also a Board Director for Tethys Petroleum Ltd, a TSX-V listed oil and gas company.

Sandy Quilty
VP Finance & CFO

Mr. Quilty is a Chartered Accountant with over 30 years experience in the international oil and gas industry working for exploration, production and service companies in Canada, UK, Netherlands, China and over 25 years in Kazakhstan and other CIS countries. Mr. Quilty articulated at Pricewaterhouse and was previously Vice President of Finance at Arawak Energy Corporation, CFO at Altius Energy Corporation and Finance and Accounting Manager at Fracmaster/BJ Services.

Jon Erickson
Sr. VP Operations

Mr. Erickson has over 35 years experience with international E&P companies including Oxy, Texaco, Chevron, Tullow Oil and Burren Energy. He has been involved in onshore and offshore asset management operations in the Middle East, Russia, Kazakhstan, Turkmenistan, Africa, and South America. He has provided effective leadership in the technical execution of projects, in particular reducing costs and implementing new technologies to enhance operational, environmental and safety results. He was instrumental in the development and expansion of assets internationally through drilling optimization and streamlining of production lifting and facilities. Mr. Erickson has managed LNG projects in several countries including Mozambique, Chad, and Gabon, for gas to power and for diesel displacement. Mr. Erickson has held past positions of Chief Operations Officer, General Manager – Operations and Drilling Manager in various oil and gas ventures. Mr. Erickson holds a degree in Petroleum engineering as well as an MBA from Eli Broad Business school.

Management Biographies

Matt Pachell
Sr. VP Asset Develop

Mr. Pachell has over 24 years of experience in geoscience and cross-disciplinary managerial roles. Previously he was VP of Development and Exploration at Pieridae Energy and held various technical and managerial roles at Anadarko Petroleum, Talisman Energy, Condor Petroleum, and Ikkuma Resources. Mr. Pachell obtained a B.Sc. in Geology (cum laude) from Denison University and an M.Sc. degree in Geology from Utah State University. He is an APEGA registered Professional Geoscientist, Certified Petroleum Geologist and Qualified Reserve Evaluator with the AAPG and is an active member of CEGA.

Trent Mercier
VP and General Counsel

Mr. Mercier specializes in international resource project transactions and public-private investment law, and has advised operating companies, supply companies, financial institutions and governments on resource projects in over 25 countries. He was a partner and global co-chair of the oilfield services group of Norton Rose Fulbright (a leading global law firm) and most recently a partner at Stikeman Elliott (the leading M&A and energy law firm in Canada). Mr. Mercier is the co-author of world-leading forms of investment agreements for investor-state oil and gas projects and lead author of the Canadian master agreement for procurement of oilfield goods and services.

Mr. Mercier is also a published author and a former instructor at the University of Calgary on International Petroleum Transactions. Supplementing his extensive legal expertise, Mr. Mercier has an education in geology and worked for Alberta's energy regulator.

Management Biographies

Norman Storm
Managing Director

Mr. Storm has conducted business in Kazakhstan for over 29 years and during this period has been involved in a wide array of business activities, including: oil and gas exploration and production, mining, oil field services, domestic and international transportation services, and manufacturing. Mr. Storm is the Managing Director of Eurasia Resource Value SE, a European-based private investment fund that is the founder of Condor Energies, as well as Osisko Mining, the developer of Canadian Malartic, Canada's largest gold mine, near Val d'Or in Quebec.

Mr. Storm also co-founded Kazakhstan's first international transport company that was the founding member of KAZATO, the IRU's (Switzerland) customs bonding agency for road transportation in Kazakhstan. The company served many of the region's major resource projects including: Kumtor Gold, Petro-Kazakhstan, Tengizchevroil, Kashagan, and Shell Temir.

Torsten Kritzler
VP Well Services

Mr. Kritzler is a Drilling and Completion Professional with a career spanning over 25 years in the international oil and gas industry. His expertise encompasses diverse environments, including Saudi Arabia, Indonesia, Angola, Nigeria, Canada, and the United States. He is proficient in designing and executing various drilling and completion operations, ranging from High Temperature/High Pressure (HT/HP) to steamflood, conventional, shelf, and deep-water projects. Notably, his 15-year tenure at Chevron was marked by a focus on integrating new technologies to enhance asset recovery across different operational contexts. Mr. Kritzler has held numerous leadership roles with leading E&P companies. His vision and commitment to implementing global best practices have consistently delivered tangible results, including reduced cycle times and costs. He has contributed to the industry's knowledge base through the publication of several technical papers, holds a MSc., MBA and serves as a responsible member for APEGA in Alberta

Appendix – Additional Information

Barrels of Oil Equivalent Advisory

References herein to barrels of oil equivalent (“boe”) are derived by converting gas to oil in the ratio of six thousand standard cubic feet (“Mcf”) of gas to one barrel of oil based on an energy conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. Given the value ratio based on the current price of crude oil as compared to natural gas is significantly different from the energy equivalency of 6 Mcf to 1 barrel, utilizing a conversion ratio at 6 Mcf to 1 barrel may be misleading as an indication of value, particularly if used in isolation.

Forward Looking Statements (1 of 3)

Certain statements contained in this presentation constitute forward looking statements. These statements may relate to future events or Condor's future performance. All statements other than statements of historical fact are forward looking statements. The use of any of the words "anticipate", "appear", "plan", "continue", "estimate", "expect", "forecast", "may", "will", "project", "should", "could", "would", "believe", "predict", "intend", "target", "scheduled", "potential", and "in process of" and similar expressions are intended to identify forward looking statements. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. No assurance can be given that these expectations will prove to be correct, and such forward looking statements included in this presentation should not be unduly relied upon. These statements speak only as of the date of this presentation. In addition, this presentation may contain forward looking statements and forward-looking information attributed to third party industry sources. Without limitation, this presentation contains forward looking statements pertaining to the following: the timing and ability to increase gas production; the timing and ability to install additional plunger lifts, perforate bypassed zones and increase production; the timing and ability to install in-line field separation to allow higher flow rates; the timing and ability to enhance Central Asia's energy security and sustainable energy transition; the timing and ability for first mover advantages to lead to continued growth; the timing and ability to increase revenues and cash flows; the timing and ability to produce and supply LNG; the timing and ability to develop lithium brine deposits for battery production; the timing and ability to apply western technologies to grow production; the timing and ability to realize growth opportunities; the timing and ability to use modern approaches to field and reservoir management to realize capital efficient enhancements; the timing and ability to obtain additional, profitable gas projects, exploration opportunities and LNG applications; the timing and ability to transport and store LNG; the timing and ability for modular LNG plants to be more efficient and cost effective than medium sized industrial users; the timing and ability to localize LNG production and distribution; the timing and ability for LNG to be more environmentally friendly than diesel; the timing and ability to generate lower GHG, particulate and sulphur emissions; the timing and ability of LNG to enhance engine performance, have less wear, provide more energy output by weight, improve efficiency, increase ranges, require less frequent refuelling and realize faster delivery times as compared to diesel only equipment; the timing and ability to receive and utilize the feed gas allocation; the timing and ability to realize LNG production; the timing and ability to support the strategy to materially expand the TITR; the timing and ability to finalize offtake volumes, delivery locations and schedules; the potential for the lithium license areas to contain commercial deposits; the extent to which prior lithium testing results are indicative of future testing results; the timing and ability of the untested intervals to provide additional lithium brine potential; the timing and ability to fund, permit and complete the planned drilling activities including drilling additional wells; the timing and ability to produce lithium by utilizing closed-looped DLE production technologies or other means; the timing and ability to confirm the lateral extensions and concentrations of the brine deposits; the timing and ability to generate a NI 43-101 compliant report; the timing and ability to complete the planned workover and optimization program and increase production; the timing and ability to eliminate gas venting; the timing and ability to access pipelines and sales markets; the timing and ability to obtain the various approvals and to conduct the Company's planned activities; the expectations, timing, and costs of the Company's planned activities; and the timing and ability to obtain future funding for the Company's planned activities on favorable terms, or at all.

Forward Looking Statements (2 of 3)

Regarding lithium historical estimates, the Company is not treating the historical estimate as current mineral resources or mineral reserves as additional drilling and testing is necessary, and a qualified person has not done sufficient work to classify the historical estimates as current mineral resources or mineral reserves. It is uncertain if further drilling will result in the area being delineated as a mineral resource or reserve.

The forward-looking statements included in this presentation are expressly qualified by this cautionary statement and are made as of the date of this presentation. Condor does not undertake any obligation to publicly update or revise any forward-looking statements except as required by applicable securities laws.

With respect to forward looking statements and forward looking information contained in this presentation, assumptions have been made regarding, among other things: the ability to obtain qualified staff and equipment in a timely and cost efficient manner; the regulatory framework governing royalties, taxes and environmental matters; the ability to market natural gas production; the applicability of technologies for recovery and production of natural gas reserves; the recoverability of natural gas reserves; future development plans for Condor's assets proceeding substantially as currently envisioned; future capital expenditures; future cash flows from production meeting the expectations stated herein; future debt levels; operating costs; the geography of the areas of exploration; the impact of increasing competition; and the ability to obtain financing on acceptable terms.

By its very nature, such forward-looking information requires Condor to make assumptions that may not materialize or that may not be accurate. Forward-looking information is subject to known and unknown risks and uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such information. Such risks and uncertainties include, but are not limited to: regulatory changes; the timing of regulatory approvals; the results of exploration and development drilling and related activities; prior lithium testing results may not be indicative of future testing results or actual results; imprecision of reserves estimates and ultimate recovery of reserves; the effectiveness of lithium mining and production methods including DLE technology; historical production and testing rates may not be indicative of future production rates, capabilities or ultimate recovery; the historical composition and quality of oil and gas may not be indicative of future composition and quality; general economic, market and business conditions; industry capacity; uncertainty related to marketing and transportation; competitive action by other companies; fluctuations in commodity prices; the effects of weather and climate conditions; fluctuation in interest rates and foreign currency exchange rates; the ability of suppliers to meet commitments; actions by governmental authorities, including increases in taxes; decisions or approvals of administrative tribunals and the possibility that government policies or laws may change or government approvals may be delayed or withheld; changes in environmental and other regulations; risks associated with oil and gas operations, both domestic and international; international political events; and other factors, many of which are beyond the control of Condor; and capital expenditures may be affected by cost pressures associated with new capital projects, including labour and material supply, project management, drilling rig rates and availability, and seismic costs.

Forward Looking Statements (3 of 3)

These risk factors are discussed in greater detail in filings made by Condor with Canadian securities regulatory authorities including the Company's: Annual Information Form, Consolidated Financial Statements and related Management's Discussion and Analysis for the year ended December 31, 2023; Interim Condensed Consolidated Financial Statements and related Management's Discussion and Analysis for the three and nine months ended September 30, 2024, which may be accessed through the SEDAR+ website (www.sedarplus.com).

The forward-looking statements included in this presentation are expressly qualified by this cautionary statement and are made as of the date of this presentation. Condor does not undertake any obligation to publicly update or revise any forward-looking statements except as required by applicable securities laws. The forward-looking information contained in this presentation is expressly qualified by this cautionary statement.
